

**Seto Inland Sea Regional Research Center held "2020 Super
Science High School" for Takamatsu Daiichi High School
at Aji Marine Station.**

The center held the Super Science High School "SSH" which titled "Familiar Sea Environmental Science" on October 5th. Participants were 20 students and 3 high school teachers.

The center has been in charge of sea teaching of SSH for special science course of Takamatsu Daiichi High School 1st grade, every year.

This year, it was conducted careful enough by reducing to half participants due to take measures the Corona epidemic.

The sea teaching was lectures at the marine station, plankton observation with microscope and mini-ocean observation on the research vessel CalanusⅢ.

Though a little desolate feeling because of small participants, the teaching was in so enrichment and the students eagerly engaged.

Boarding on Calanus III

Setting sail of Calanus III

Collection of phytoplankton by plankton net ①

Collection of phytoplankton by plankton net ②

Collection of columnar seabed sediments

Let's touch the seabed sediments

Observing collected plankton with microscope
