

**December 12,2021**

**Professor Hayashi and the students, College of Human and Social Sciences, Kanazawa University visited the Aji Marine Station of the Seto Inland Sea Regional Research Center.**

Professor Hayashi and the students, College of Human and Social Sciences, Kanazawa University visited the Aji Marine Station to collect information and exchange opinions for developing board games for environmental learning.

Speaking of board games, we can only think of "The Game of Life", but in Europe, especially in Germany, there are so many types and abundant contents.

Professor Hayashi and his students are working on a game development to educate the general public so that they can learn about the impact of human activities on the environment of coastal waters through board games that incorporate seaweed "Nori" farming.

This time, they collected information about the discoloration of seaweed and red tide.

After actually seeing the site of the seaweed farm, we exchanged information and opinions for about 3 hours at the Marine Station.

Finally, we talked about we will continue to interact with each other in the future, for the general public, especially children will be interested in environmental issues in the coastal waters.

We hope that our activities will lead to environmental conservation in the coastal waters of Japan.

Looking at Shido Bay from Calanus's deck

Arriving at seaweed farm

The day, Shido Bay had crystal clear sky

① Seaweed farm and reaping boat  
(the boat passing under seaweed net to reap seaweed)
